

TRADESHOW@HOME INSTEAD OF AGRITECHNICA:

Technology Partner of Drive Technology

From mission to vision – in recent years, SAUER BIBUS has evolved from a hydraulics specialist into a partner for drive technology.

SAUER BIBUS used the time and wanted to present itself at Agritechnica 2022 in association with the BIBUS Group as a competent technology partner for drive technology.

With the focus on sustainability and innovative drive systems, the orientation would have been ideally suited to the 2022 theme of the world's leading trade fair for agricultural technology, „Green Efficiency inspired by Solutions“. Managing Director Ralf Schrempp regretted the cancellation of Agritechnica, but immediately launched an exciting alternative with the Tradeshow@home at the company's location in Neu-Ulm.

Tradeshow@home sees itself as a digital and real experience platform for customers and interested parties in the typical Agritechnica industries. The core of the program is:

- SAUER BIBUS livestream on 03.03.2022 at 3:00 p.m.

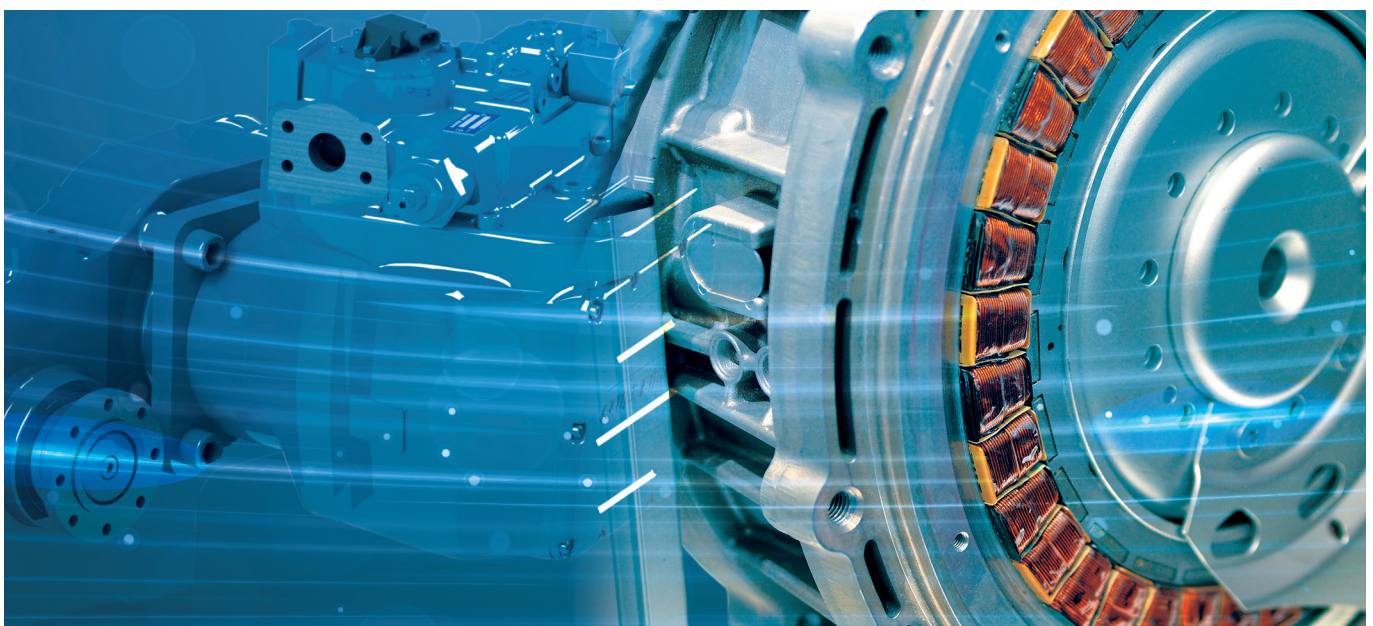

- Agritechnica booth in the SAUER BIBUS studios

- Customer days with electric and hydraulic drive solutions

The company thus offers the opportunity to get to know innovative solutions made by SAUER BIBUS on all of the original days of the trade fair.

Tradeshow@home dedicated to electric drive technology

In the wake of the high demand for electric drives in industries including agriculture and construction, SAUER BIBUS is currently working on the development of an electric drive project which will be exhibited at the event.

Ralf Schrempp is counting on the element of surprise:

“Although we don’t want to give too much away at the moment, it’s a development for use in environments close to urban areas where electrification is a big issue.”

This is the kind of challenge SAUER BIBUS is today perfectly suited to take on. In recent years, the company has continuously invested in expanding its design and development capacities. SAUER BIBUS employs a large number of highly trained development engineers who cover all requirements in the fields of work, drive and control. As a result, it draws on excellent know-how including expertise in electric drive solutions.

From prototype construction to series production

As technology partner of drive technology, SAUER BIBUS offers not only expert development and prototype construction in its own workshop, but also highly efficient in-house assembly and series production. This is crucial for many customers. Among other things, they want fast, confidential production of prototypes within the system development process and with as little involvement of third parties as possible.

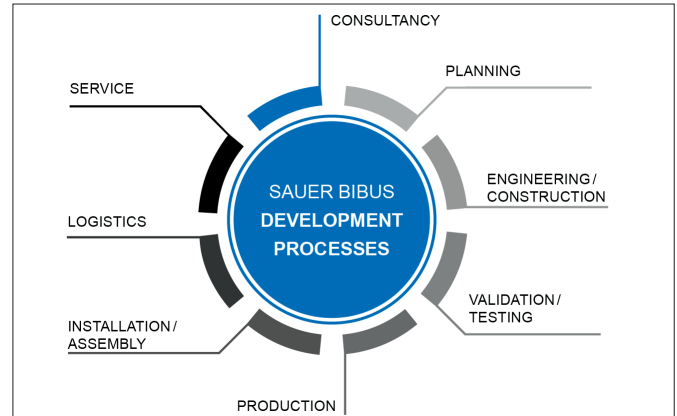

SAUER BIBUS offers the following services in both areas of expertise:

Mobile applications

For manufacturers in industries such as agricultural, forestry and construction machinery.

Stationary solutions

Aggregate and test rig construction, drives for auxiliary functions as well as retrofitting.

These solutions are complemented by other services ranging from logistics to spare parts and components, through to maintenance, repairs and servicing. As a result, SAUER BIBUS can cover the entire process chain or individual process steps depending on each customer’s needs.
