A wide range of steering components

hfa1391605590092

Danfoss is one of the largest producers in the world of steering components for hydrostatic steering systems on off-road vehicles. Danfoss offers steering solutions both at component and system levels. Our product range makes it possible to cover applications of all types, ranging from ordinary 2 wheel steering (also known as Ackermann steering) to articulated steering, automatic steering (for example, by sensor) and remote controlled steering via satellite. We can offer more than 1,800 different steering units and 250 different priority valves categorized in types, variants and sizes.

For hydrostatic steering systems, Danfoss offers:

- Mini steering units with displacements from 32 to 100 cm³/rev [1.95 to 6.10 in³/rev], flow up to 20 l/min [5.28 US gal/min], steering pressure up to 140 bar [2030 psi].
- Steering units with displacements from 40 to 1200 cm³/rev [2.44 to 73.2 in³/rev], flow up to 100 l/min [26.4 US gal/min], steering pressure up to 240 bar [3481 psi].
- Priority valves for rated flows at 40, 80, 120, 160 and 320 l/min [10.6, 21.1, 31.7, 42.3 and 84.5 US gal/min], pressure up to 350 bar [5076 psi].
- Pilot operated flow-amplifiers with amplification factors of 4, 5, 8, 10 or 20 for rated oil flows of 240 and 400 l/min [63.4 and 105.7 US gal/min], steering pressure up to 240 bar [3480 psi].
- Pilot operated steering valve with steering flow up to 100 l/min [26.4 US gal/min], steering pressure up to 250 bar [3625 psi] and with integrated priority valve for pump flow up to 120 l/min [31.7 US gal/min].

For electrohydraulic steering systems Danfoss offers:

- Pilot operated steering valves (pilot operated by hydrostatic steering unit or by electrical signal) with steering flows up to 100 l/min [26.4 US gal/min], steering pressure up to 250 bar [3625 psi].
- Steering units with integrated electrical operated steering valve with steering flow up to 50 l/min [13.2 US gal/min], steering pressure up to 210 bar [3045 psi].
- Electrical operated steering valve with steering flow up to 70 l/min [18.5 US gal/min], steering pressure up to 210 bar [3045 psi].

Characteristic features for steering units:

- Low steering torque: From 0.5 N·m to 3 N·m in normal steering situations
- Low noise level
- Low pressure drop

A wide range of steering components

- Many types available: Open center Non-reaction, Open center Reaction, Power Beyond, Closed center Non-reaction, Load Sensing, Load Sensing Reaction
- One or more built-in valve functions: relief valve, shock valves, suction valves, non-return valve in P-line and in LS-line
- Optional port connections (according to ISO, SAE or DIN standards)

Characteristic features for electrohydraulic steering systems with OSPE, EHPS, and EHi:

- Possibility of GPS, row sensor, variable steering ratio and joystick steering
- The possibility of manual steering even on very heavy vehicles
- EHPS: High steering pressure requiring smaller cylinders and flow
- EHPS: Low pilot pressure and flow giving extremely low noise in the cabin
- EHPS: Can be combined with Danfoss PVG 32 proportional valve

Conversion factors

1 N·m = [8.851 lbf·in]	1 l = [0.264 US gal]
1 N = [0.2248 lbf]	1 bar = [14.5 psi]
1 mm = [0.0394 in]	°F = [1.8°C + 32]
1 cm ³ = [0.061 in ³]	

Survey of literature with technical data on Danfoss steering components

Detailed data on all Danfoss steering components and accessories can be found in our steering component catalogues, which is divided in to the following individual sub catalogues:

General information	Steering components
Technical data on mini steering units	OSPM
Technical data on open center, and closed center steering units	OSPB, OSPC, and OSPD
Technical data on load sensing steering units, priority valves and flow amplifiers	OSPB, OSPC, OSPF, OSPD, OSPL, OSPBX, OSPLX, OVPL, OLS and OSQ
Technical data on load sensing steering unit with amplification	OSPU
Technical data on hydraulic and electrohydraulic pilot operated steering valves, electrical actuation modules and appropriate steering units.	EHPS, EHPS w. OLS 320, PVE for EHPS and OSPCX
Technical data on combined steering unit/ electrohydraulic steering valves and steering wheel sensors	OSPE
Technical data on electrohydraulic steering valves	EHi
Technical data on steering wheel sensors	SASA

For technical information on individual variants, please contact the Danfoss Sales Organization.

LS Steering Units OSPB, OSPC, OSPF, OSPD, OSPL

Versions

Load sensing

In load sensing steering systems both the steering system and the working hydraulics can be supplied with oil from the same pump, using a load sensing pump, also delivers the potential for energy saving.

Load sensing steering units have an extra connection for load sensing (LS), so that a load pressure signal can be directed via the steering unit to a Danfoss priority valve and/or an LS pump. The load sensing signal controls the oil flow from the priority valve (and/or the LS pump) to the steering unit. The LS connection is open to tank when the steering unit is in the neutral position.

Load sensing static

Load sensing static steering units require load sensing static priority valves and/or load sensing static variable displacement pumps. Load sensing static steering systems have no oil flow in the LS connection when the steering unit is in neutral position.

Load sensing dynamic

Load sensing dynamic steering units require load sensing dynamic priority valves and/or load sensing dynamic variable displacement pumps. Load sensing dynamic steering systems have a constant oil flow in the LS connection in the direction of the steering unit even when the steering unit is in neutral position.

Reaction

With reaction steering units any external forces acting on the steered wheels result in a corresponding movement of the steering wheel when the driver is not steering the vehicle.

Non-reaction

With non-reaction steering units there is no corresponding movement of the steering wheel when the driver is not steering the vehicle

OSPB LS: Steering unit with no valve functions

OSPB LS (OLS)
Load sensing static non-reaction and load sensing dynamic non-reaction

F300 614

Top: Danfoss diagram; bottom: CETOP diagram

150-301.11

LS Steering Units OSPB, OSPC, OSPF, OSPD, OSPL

OSPC LS: Steering unit load sensing with integrated valve functions for in line priority valve OLS

OSPC LS (OLS)
Load sensing dynamic non-reaction

OSPC LS: Steering unit load sensing with integrated valve functions for flange on priority valve OLSA

OSPC LS (OLSA)
Load sensing dynamic non-reaction

LS Steering Units OSPB, OSPC, OSPF, OSPD, OSPL

OSPC LSR: Steering unit load sensing dynamic with integrated valve functions

OSPC LSR (OLS)
Load sensing dynamic reaction

F300 617

150-598.11

OSPF LS : Steering unit full drain load sensing dynamic and with integrated valve functions

OSPF LS (OLS)
Load sensing dynamic non-reaction

F300 617

150-597.11

LS Steering Units OSPB, OSPC, OSPF, OSPD, OSPL

OSPD LS: Steering unit load sensing dynamic with 2 rotary meters and with integrated valve functions

The OSPD has 2 rotary meters (gear wheel sets). Should the pump supply be lost, only one rotary meter will be active: OSPD displacement will be low for emergency steering (only one rotary meter active) for pressure P-T <3 bar. Displacement will be high for pressure P-T >5 bars: both rotary meters are active.

OSPD LS (OLS)
Load sensing dynamic non-reaction

OSPL LS:

Steering unit load sensing for high steering flow, displacement larger than 500 cm³/rev [30.5 in³/rev].

OSPL LS (OLS) - Load sensing static non-reaction

LS Steering Units OSPB, OSPC, OSPF, OSPD, OSPL

OSPL LS (OLS) - Load sensing dynamic non-reaction

OSPL 1200 (OLS) Load sensing dynamic non-reaction

LS Steering Units OSPB, OSPC, OSPF, OSPD, OSPL

OSPBX LS, OSPCX LS and OSPLX LS: Steering units load sensing for flow amplifiers

OSPBX LS, OSPCX LS and OSPX LS are load sensing steering units with the L and the R connections open to tank when in neutral position. OSPBX LS, OSPCX LS and OSPX LS can only be used with Danfoss flow-amplifiers OSQA or OSQB. OSPBX LS, OSPCX LS and OSPX LS steering units must not be connected directly to the steering cylinder. OSPCX LS is for OSQ dynamic without pilot pressure relief valve.

OSPBX LS, OSPLX LS - Load sensing static

OSPCX LS - Load sensing dynamic

LS Steering Units OSPB, OSPC, OSPF, OSPD, OSPL

Code numbers and weights

OSPB load sensing static non-reaction steering units

OSPB LS Static steering units have no valve functions.

OSPC load sensing dynamic non-reaction steering units

OSPC LS Dynamic steering units in the table below incorporate all the following valve functions:

- check valve in P-port
- pilot pressure relief valve
- shock valves
- suction valves
- check valve in LS-line for all OSPC LS Dynamic up to and including 200 cm³/rev

OSPC LS in the table below have all standard neutral setting springs, see [Specification Table for Non Catalogue Numbers of LS Steering Units](#)

OSPF 400 LS	150G5085			7.0 [15.43]

^{**}) Spot face around port connections (can not be used in connection with OVR angular block)

If you require other port connections, valve combinations, valve settings and/or other displacements, please fill in the order form in the [Specification Table for Non Catalogue Numbers of LS Steering Units](#) and contact the Danfoss Sales Organization.

OSPD load sensing non-reaction steering units

OSPD LS Dynamic steering units in the table below incorporate all the following valve functions:

- check valve in P-port
- pilot pressure relief valve
- shock valves
- suction valves
- check valve in LS-line

OSPD LS in the table below have all standard neutral setting springs, see [Specification Table for Non Catalogue Numbers of LS Steering Units](#)

OSPL 1000 LS	150-8245		10.0 [22.05]

^{**}) Spot face around port connection

 If you require other displacements or other valve setting, please fill in the order form in the [Specification Table for Non Catalogue Numbers of LS Steering Units](#) and contact the Danfoss Sales Organization.

OSPL 1200 LS Dynamic steering unit in the table below incorporate all the following valve function:

LS Steering Units OSPB, OSPC, OSPF, OSPD, OSPL

- shock valves
- suction valves

OSPL 1200 LS in the table below has strong neutral setting springs, see [Specification Table for Non Catalogue Numbers of LS Steering Units](#)

Steering unit	Code numbers	Valve settings	Weight kg [lb]
	Connections US version for OLS 3/4 - 16 UNF - O*) CF: 11/16 - 12 UN 7/16 - 20 UNF - O*)* + S**)	Shock valves bar [psi]	
OSPL 1200 LS	150-7175	280 [4061]	11 [24.25]

*) O-ring chamfer on port connections

**) Spot face around port connection

If you require other displacements or other valve setting, please fill in the order form in the [Specification Table for Non Catalogue Numbers of LS Steering Units](#) and contact the Danfoss Sales Organization.

OSPBX and OSPLX load sensing static steering units for OSQ static

OSPBX LS and OSPLX LS Static steering units in the table below have no valve functions.

OSPBX LS in the table below have all standard neutral setting springs, see [Specification Table for Non Catalogue Numbers of LS Steering Units](#)

OSPLX LS in the table below have all strong neutral setting springs, see [Specification Table for Non Catalogue Numbers of LS Steering Units](#)

Steering unit	Code numbers		Weight kg [lb]

Unit black painted	Yes						No							

LS Steering Units OSPB, OSPC, OSPF, OSPD, OSPL

DP = Displacement, RV = Pilot pressure relief valve.

O*: O-ring chamfer on port connections.

S**: Spot face around port connections (can not be used in connection with OVR angular block).

RV*** see [Technical data](#) for limitation in maximum pressure depending on displacements.

Types not mentioned with port connections in the table above, are only available in the version(s) stated in the code number tables.

An alternative way to specify a variant is to state an existing code number and add the modifications, you would like to have implemented in the basic steering unit.

Code number of basic steering unit: _____

Requested modifications: _____

** OSPL 1200 max speed at 100l/min [26.4 US gal/min] 83 rpm.

LS Steering Units OSPB, OSPC, OSPF, OSPD, OSPL

Valve functions in OSPC, OSPF, OSPD and OSPL LS steering units

Pilot pressure relief valve; (P - T, Qp) characteristic

The pilot pressure relief valve protects the steering unit against excessive pressure. The pilot pressure relief valve in the OSPC LS, OSPF LS, OSPD LS and OSPL LS steering unit together with the priority valve limit the maximum steering pressure P-T. The pilot pressure relief valve is set at an oil flow to the priority valve of 25 l/min [6.60 US gal/min].

For OSPC, OSPD and OSPL load sensing dynamic steering units, the setting values are valid at a dynamic flow of 0.6 l/min [0.16 US gal/min].

For OSPF load sensing dynamic steering units, the setting values are valid at a dynamic flow of 1.1 l/min [0.29 US gal/min].

Setting tolerance:

<= 170 bar [2465 psi]: rated value +5 bar [72.5 psi].

> 170 bar [2465 psi]: rated value +10 bar [145 psi].

152B79.10

A = 170 + 5 bar [2465+ 73 psi]

- 0 - 0

B = 140 + 5 bar [2030 + 73 psi]

- 0 - 0

Shock valves

The shock valves protect the steering unit and reduce external forces on the steering cylinder by limiting the pressure difference from L to T and from R to T.

The shock valves are set at 3 l/min [0.792 US gal/min]

At higher flow pressure peaks may occur.

The shock valves are of the direct acting type, so they react very quickly.

Setting tolerance: rated value +20 bar [290 psi].

Suction valves

The suction valves allow oil suction to avoid cavitation in the steering cylinder. To provide correct suction, a back pressure valve must be fitted in the tank line from the steering unit.

LS Steering Units OSPB, OSPC, OSPF, OSPD, OSPL

Generally Danfoss recommend a back pressure of 2 bar [29 psi], but on vehicles with strong self straightening tendencies and on articulated steered vehicles, we recommend 5-10 bar [72.5 - 145 psi]. For further advice, please contact the Danfoss Sales Organization.

A connection which incorporates a check valve must be established to allow oil flow to by-pass the back pressure valve (and filter) from the tank to steering unit. See diagram examples in sub catalogue "General Steering Components" page 37 - 39.

Check valves

The check valve in the P connection of the steering unit protects the driver against steering wheel jerks. The check valve prevents oil from flowing backwards into the pump line when steering against a high pressure on the cylinder side. The pressure drop across the check valve is indicated on the following graph, which assumes the use of port adapters with 11 mm [0.43 in] minimum bore.

The check valve in the LS line of OSPC LS and OSPD LS dynamic steering units also protects the driver against steering wheel jerks. The check valve prevents oil from flowing backwards into the LS line to the priority valve when steering against a high pressure on the cylinder side.

In OSPF LS oil cannot flow backwards into the LS line, look in sub catalogue: "General Steering Components" page 26.

Valve Block OVPL

OVPL valve blocks can be flanged onto Danfoss steering units type OSPL, which are prepared for OVPL mounting.

Versions

OVPL valve blocks contain shock valves, suction valves, check valve and back-pressure valve. OVPL valve blocks are available with 4, 5 or 7 connections. OVPL with 7 connections have 2 L and 2 R connections, which means that 2 steering cylinders can be connected directly to the valve block.

OVPL, 7 ports

Valve Block OVPL

Technical data

Common data

Common data, refer to *General Steering Components Technical Information*, **BC00000096**.

Valve functions

The data below come from measurements on a representative sample of valve blocks from production.

An oil with a viscosity of 21 mm²/s [SUS] at 50°C [122°F] was used during measuring.

Valve block	Max. Oil flow l/min [US gal/min]	Max. pressure on connections		
		P, PP bar [psi]	T bar [psi]	L, R bar [psi]
OVPL 24	100 [26.42]	190 [2756]	15 [218]	240 [3480]
OVPL 28	100 [26.42]	225 [3263]	15 [218]	280 [4061]

Shock valves

The shock valves protect the valve block and steering unit and limit maximum external forces on the steering cylinder. The shock valves in the valve block limit the maximum pressure drop from L to T and from R to T.

The shock valves are set at 10 l/min. [2.64 US gal/min].

The shock valves are of the direct acting type, so they react very quickly.

Setting tolerance: rated value +/- 10 bar [145 psi], ex. 240 [3480 psi] +/- 10 bar [145 psi].

Valve Block OVPL

Suction valves

The suction valves ensure oil suction to avoid cavitations in the steering cylinder. To provide correct suction, a back pressure valve must be fitted in the tank line from the steering unit.

The capacity of the suction valves can be increased by building in a back pressure in the valve block.

The curve below shows pressure drop across a suction valve

Check valve

The check valve protects the driver against steering wheel jerks. The check valve prevents oil from flowing backwards into the pump line when steering against a high pressure on the cylinder side.

The check valve is built into the P connection of the valve block.

The curve below shows pressure drop across the check valve in p-connection

Backpressure valve

A backpressure valve increases the capacity of the suction valves.

The curve below shows pressure drop for backpressure valve without by-pass.

Valve Block OVPL

The curve below shows pressure drop for backpressure valve with by-pass.

Installation

Connection P in the valve block must be placed over the connection P in the steering unit, so OVPL is provided with a positioning pin to fit the positioning hole in the steering unit.

The valve block is supplied inclusive of 2 mounting screws and 4 O-rings for building onto the steering unit.

Tightening torque 65 ±5 N·m [575 ±44 lbf·in]. It is only allowed to mount OVPL blocks on steering units with a flat port flange, no spot face is allowed.

Angle Block OVR

OVR angle blocks are especially designed for applications in which pipes and/or hoses must run parallel with the steering column axis, and where space is limited.

The valve block can be flanged onto Danfoss steering unit OSPB, OSPC, OSPD, OSPF, OSPQ and OSPL, which have no spot face around the ports.

Use the angle block makes angle and swivel connections and pipe bends unnecessary.

The OVR connections are positioned away from the steering wheel. (see [Dimensions](#) on page 46)

Version

OVR

Code numbers and weight

OVR in the table below has no valve functions incorporated.

Angle block	Code numbers	Weight
	Connections European version P, T, L, R: G 1/2 S**	kg [lb]
OVR	152-0201	2.0 [4.41]

S** : Spot face around port connections

Installation

The valve block is supplied inclusive of 2 mounting screws and 4 O-rings for building onto the steering unit.

Tightening torque $65 \pm 5 \text{ N}\cdot\text{m}$ [$575 \pm 44.3 \text{ lbf}\cdot\text{in}$]. OVR blocks may only be mounted on steering units with a flat port flange, (no spot facing).

For OVR blocks with other thread ore kind of valves mounted, please contact the Danfoss Sales organization.

P, T, L and R:

Priority Valves OLSA and OLS

Versions

Danfoss priority valves are used in steering systems with load sensing steering units. In such systems steering always has first priority

Load sensing static priority valves

Load sensing static steering units require load sensing static priority valves. Load sensing static steering systems have no oil flow in the LS connection when the steering unit is in neutral position.

Load sensing dynamic priority valves

Load sensing dynamic steering units require load sensing dynamic priority valves. Load sensing dynamic steering systems have a constant oil flow in the LS connection from the priority valve to the steering unit even when the steering unit is in neutral position.

Ports:

P = pump,

CF = controlled flow (priority oil flow),

EF = excess flow,

L = left,

R = right,

T = tank,

LS = load sensing,

PP = pilot pressure

OLSA 40/80

The OLSA 40 and OLSA 80 "flange on" priority valves are used in load sensing steering systems, built onto OSPC LS (OLSA) steering units.

152B137.11

OLS static

152B172.11

OLS dynamic

OLS 160 is also available without pilot pressure relief valve.

Priority Valves OLSA and OLS

The priority valve OLSP 80 is to be used in connection with e.g. Danfoss gear pumps type SNP and steering units type OSPB LS, OSPC LS, OSPF LS, OSPD LS and OSPU LS in load sensing steering systems, where maximum oil flow does not exceed 80 l/min [21.7 US gal/min].

OLSP 80 priority valves are to be flanged on gear pumps with outlet ports square flange type 35 (35 mm pitch diameter of 4x M6 bolt holes for fixing the priority valve on pump).

320 l/min [84.5 USgal/min].

OLS 320

F301 470

EHPS steering valve has built in priority valve, but for max. pump flow 120 l/min [31.7 USgal/min] In systems with EHPS and pump flow between 120 l/min [31.7 USgal/min] and 320 l/min [84.5 USgal/min] a combination of EHPS and OLS 320 gives a good compact solution to reduce hosing and installation cost compared with stand alone components. For further details of this OLS 320: look in *EHPS Steering Valve with PVE Electrical Actuation Module and OSPCX CN Steering Wheel Technical Information, BC00000101*.

1528172.11

F301 471

System sizing

The steering system pump is sized so that satisfactory performance is achieved for both steering and working hydraulics - even at idle.

Before selecting a priority valve, consider

Priority Valves OLSA and OLS

- the type of steering unit (LS static, LS dynamic or OSPF LS dynamic)
- the displacement of the steering unit
- the pump flow
- the application's requirement for energy optimization, initial steering response time and stability, as these all govern the selection for control spring pressure
- whether the priority valve should have internal PP (Pilot Pressure) or external PP-connection depends on the pressure drop in the pump line between the priority valve's CF-port (Controlled Flow) and the steering unit's P-port. With normal hose and tube dimensions and less than 5 m distance between priority valve and steering unit, the immediate choice is normally a priority valve with internal PP.

The following survey lists the code numbers of the priority valves that are the most frequently used in connection with the above Danfoss steering unit types. All priority valves in the code number tables, except OLS 160 static, have internal PP connection. OLS 160 static in the code number table all have external PP connection.

Pressure drop in priority valves

This data comes from measurements on a representative sample of priority valves from production. Oil with viscosity of 21 mm²/s at 50 °C [102 SUS at 122 °F] was used during measuring. Measurement made when pressure on the LS connection is zero (steering unit in neutral position). The minimum curves apply when the pressure on the EF connection is higher than the actual control spring pressure. The curves for control spring pressure of 4, 7, 10 or 12 bar [58, 101, 145 or 174 psi] apply when pressure on the EF connection is zero.

Priority Valves OLSA and OLS

Pressure drop P-EF for OLS 320 dynamic priority valves

OLS 320

OLS 160 and OLS 320, pilot pressure relief valve (P - T, Q_p) characteristics

OLS 160 and OLS 320 with pilot pressure relief valves are used in connection with Danfoss steering units without pilot pressure relief valve, normally steering unit type OSPL. The pilot pressure relief valve protects the steering unit against excessive pressure. The pilot pressure relief valve in OLS 160/320 operates with the priority valve spool in the OLS 160/320 to limit the maximum steering pressure P-T measured across the steering unit ports.

OLS 160: The pilot pressure relief valve is set when an oil flow of 80 l/min [21 US gal/min] is supplied to OLS 160.

OLS 320: The pilot pressure relief valve is set when an oil flow of 40 l/min [11 US gal/min] is supplied to OLS 320.

OLS 160 and OLS 320: Setting tolerance: rated value +10 bar [145 psi]

OSQB/OLSQ dynamic flow amplifier for load sensing dynamics steering units

OSQB with OLSQ has no pilot pressure relief valve.

Flow Amplifiers OSQA, OSQB and OSQB/OLSQ

This flow amplifier has to be used in connection with steering unit type OSPCX LS, which has incorporated pilot pressure relief valve

Flow amplifier	Code numbers	Setting pressures	Control spring pressure bar [psi]	Weight kg [lb]
	Connections see <i>Dimensions</i> on page 80 European version	Shockvalves bar [psi]		
OSQB 8/OLSQ	150F8010	260 [3770 psi]	7 [101.5]	32 [70.6]

If you require other amplification factors, other valve settings or other control spring pressures, please fill in the order form under *Specification table for non catalogue numbers of Danfoss Priority Valves* on page 55 and contact the Danfoss Sales Organization.

Flow Amplifiers OSQA, OSQB and OSQB/OLSQ

Specification table for non catalogue numbers of Danfoss Flow Amplifier

Fill in your company data and place x's in the table where appropriate, then send to your Danfoss Sales Organization

Your company	Name	Vehicle	Potential pcs/year	Completed by	Date	
Your application	Pump flow to OSQ at idle, l/min [US gal/min]			Pump flow to OSQ at max engine speed, l/min [US gal/min]		
Flow amplifier type	OSQA	OSQB	OSQB/OLSQ			
Amplification factor	4	5	8	9.1	16.5	
Load sensing type	Static		Dynamic			
Control spring bar	7 [101]	10 [145]	16 [232]			
PP-connection	Internal		External			
Ports, OSQA	G: European version HP, EF, HT, CL, CL: G 3/4 P, T, L, R: G 1/2 PP, LS: G 1/4		UNF: US version HP, EF, HT, CL, CR: 1 1/16 - 12 UNF P, T, L, R: 3/4 - 16 UNF PP, LS: 7/16 - 20 UNF			
Ports, OSQB	G: European version HP, EF,: 1 1/4 in SAE flange HT, CL, CR: 1 in SAE flange P, T, L, R: G 1/2 PP, LS: G 1/4		UNF: US version HP, EF: 1 1/4 in SAE flange HT, CL, CR: 1 in SAE flange P, T, L, R: 3/4 - 16 UNF PP, LS: 7/16 - 20 UNF			
Ports, OSQB/OLSQ	G: (European version) HP, EF: 1 1/4 in SAE flange HT, CL, CR: 1 in SAE flange POSQ, POLSQ, T, L, R: G 1/2 PP, LS: G 1/4					
Pilot pressure relief valve bar [psi]	100 [1450]	120 [1740]	140 [2030]	170 [2465]	210 [3045]	No relief valve (only OSQB/OLSQ)
Shock valves, bar [psi]	165 [2393]	200 [2900]	230 [3335]	260 [3770]	270 [3916]	
Back pressure valve	Yes (Only OSQB)			No		
Unit black painted	Yes			No		

An alternative way to specify a variant is to state an existing code number and add the modifications, you would like to have implemented in the basic flow amplifier.

Code number of basic flow amplifier: _____

Requested modifications:

Flow Amplifiers OSQA, OSQB and OSQB/OLSQ

Technical data

Flow and pressure

OSQB 10	9.1		1820 [111]	2865 [175]	3640 [222]			
OSQB 20	16.5	2640 [161]	3300 [201]					

Installation

The flow amplifier has to be mounted on a flat surface.

Mounting screw	Tightening torque, Nm [lbf.in]
M 10 x 1.5	30 ±5 [265 ±44]
3/8 - 16 UNC	40 ±5 [354 ±44]
7/16 - 14 UNC	55 ±5 [487 ±44]

Tightening torque for fittings: Look in sub catalogue "General Steering Components" page 36.

Valve functions in the flow amplifiers

The data below come from measurements on a representative sample of flow amplifiers from production. Oil with viscosity of 21 mm²/s [102 SUS] at 50 °C [122 °C] was used during measuring.

Priority valve

The priority valve is used in load sensing systems where the same pump supplies oil to both the steering system and working hydraulics. The steering system always has first priority. Measurements were made when the pressure on the LS connection is zero (steering unit is in neutral position). The minimum curves apply when the pressure on the EF connection is higher than the actual control spring pressure. The curves for control spring pressure of 7 bar [101.5 psi] apply when the pressure on the EF connection is zero

Flow Amplifiers OSQA, OSQB and OSQB/OLSQ

OSQA

OSQB

OSQ pilot pressure relief valve (HP - HT, Qp) characteristic

The pilot pressure relief valve protects the steering valve against excessive pressure. The pilot pressure relief valve together with the priority valve limit the maximum steering pressure HP-HT.

The pilot pressure relief valve in OSQ is set with an oil flow of 140 l/min [37 US gal/min] supplied to the HP connection.

For OSQA the setting values are valid for pump flow 140 l/min [37 US gal/min].

For OSQB the setting values are valid for pump flow 240 l/min [63 US gal/min]: the setting is done at 140 l/min [37 US gal/min], but compensated to match 240 l/min [63 US gal/min].

Setting tolerance: rated value +10 bar [+145 psi]. The curves below are valid for rated settings 170 bar [2466 psi].

Flow Amplifiers OSQA, OSQB and OSQB/OLSQ

OSQA

OSQB

Back pressure valve

The back pressure valve in (OSQB only) increases the capacity of the suction valves. The pressure drop shown applies to the back pressure valve only.

Flow Amplifiers OSQA, OSQB and OSQB/OLSQ

Shock valves

The shock valves protect the flow amplifier against shock from external forces on the steering cylinders. The shock valves in OSQA and OSQB limit the maximum pressure drop from CL to HT and from CR to HT. The shock valves are set at 10 l/min [2.64 US gal/min].

Setting tolerance: rated value +20 bar [290 psi].

Suction valves

The suction valves ensure oil suction on the side of the steering cylinder pistons where in unfavorable conditions cavitation might occur. The capacity of the suction valves is increased in OSQB by the built-in back pressure valve.

Priority valve OLSQ for emergency circuit in OSQB/OLSQ

When under normal steering conditions the stand-by pressure in the main circuit (minimum 7 bar [101.5 psi] priority valve spring in OSQ) overrules the spring pressure in OLSQ (4 bar [58 psi] spring), OLSQ's priority valve will pass oil from the emergency steering pump across OLSQ's P-connection to the flow amplifier's HT tank connection.

Flow Amplifiers OSQA, OSQB and OSQB/OLSQ

If the oil supply from the main pump should fail, the stand-by pressure of OSQ's priority valve in the main pump circuit disappears and relocates the spool in OLSQ to enable the oil from the emergency steering pump to enter the pump circuit in the OSQ.

The curve shows the pressure drop from OLSQ's P-connection to OSQ's HT-connection with an active main pump and neutral positioned steering. The curve solely applies to OSQs without any back pressure valve in the tank line.

Products we offer:

- Bent Axis Motors
- Closed Circuit Axial Piston Pumps and Motors
- Displays
- Electrohydraulic Power Steering
- Electrohydraulics
- Hydraulic Power Steering
- Integrated Systems
- Joysticks and Control Handles
- Microcontrollers and Software
- Open Circuit Axial Piston Pumps
- Orbital Motors
- PLUS+1® GUIDE
- Proportional Valves
- Sensors
- Steering
- Transit Mixer Drives

Danfoss Power Solutions is a global manufacturer and supplier of high-quality hydraulic and electronic components. We specialize in providing state-of-the-art technology and solutions that excel in the harsh operating conditions of the mobile off-highway market. Building on our extensive applications expertise, we work closely with our customers to ensure exceptional performance for a broad range of off-highway vehicles.

We help OEMs around the world speed up system development, reduce costs and bring vehicles to market faster.

Danfoss – Your Strongest Partner in Mobile Hydraulics.

Go to www.powersolutions.danfoss.com for further product information.

Wherever off-highway vehicles are at work, so is Danfoss. We offer expert worldwide support for our customers, ensuring the best possible solutions for outstanding performance. And with an extensive network of Global Service Partners, we also provide comprehensive global service for all of our components.

Please contact the Danfoss Power Solution representative nearest you.
