### Methodology:

This document is intended for manufacturers of machines that incorporate Poclain Hydraulics products. It describes the technical characteristics of Poclain Hydraulics products and specifies installation conditions that will ensure optimum operation. This document includes important comments concerning safety. They are indicated in the following way:

Safety comment.

This document also includes essential operating instructions for the product and general information. These are indicated in the following way:

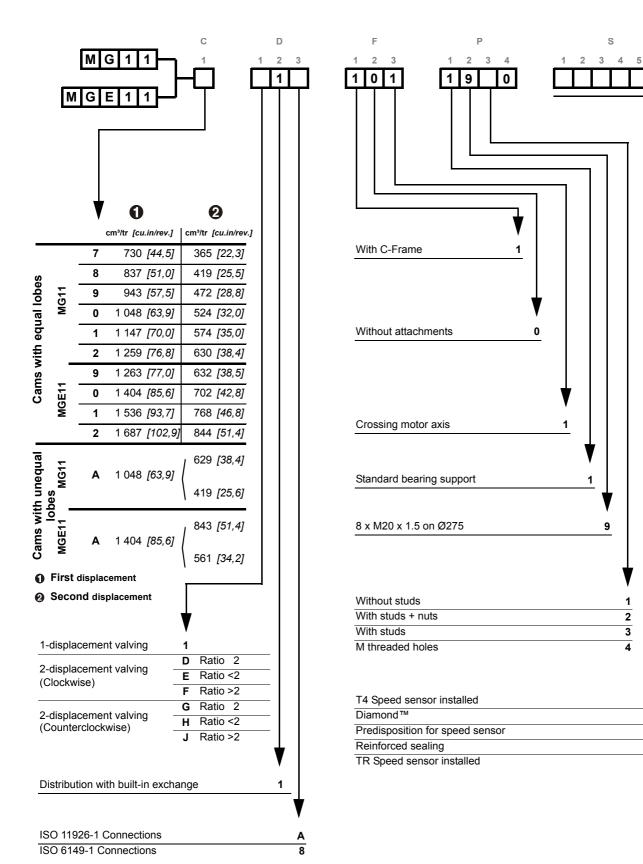

The views in this document are created using metric standards.

The dimensional data is given in mm and in inches (inches are between brackets and italic)

# 0

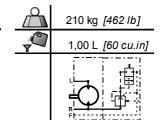

## **MODEL CODE**

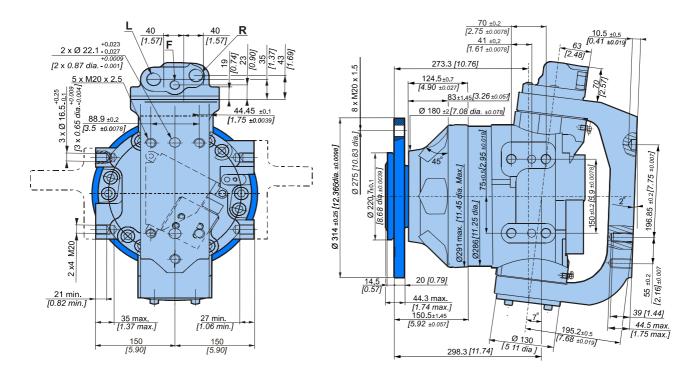

Model code Characteristics 2 7 8 Ε S

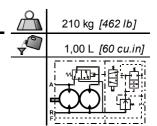

# **CHARACTERISTICS**

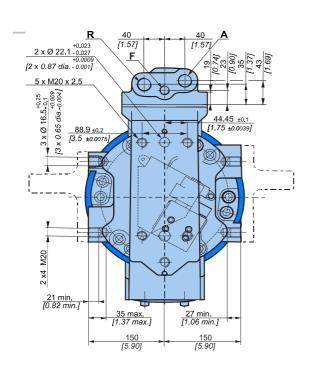

Standard (1910) single displacement motor with built-in exchange

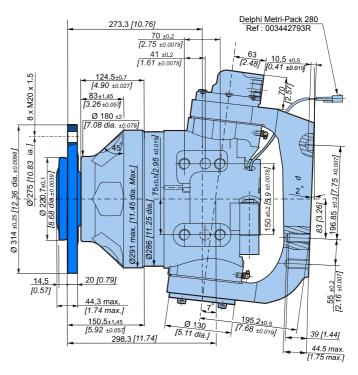

### Standard (1910) 2 displacement motor with built-in exchange

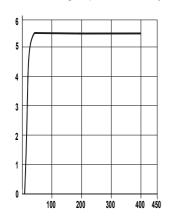

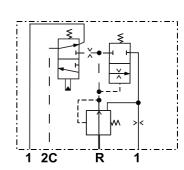

### **Exchange**

When a coding request is made, you must specify information on the threshold of the selector and the valve.

The exchange flow rate indicated on the basis of the supply pressure (P = 50 bar [725 PSI]) is constant (Q = 5.5 l/min [1.45 GPM]).

Model code

#### Load curves

The given load curves correspond to the conditions specified below. For load curves corresponding to your specifications, contact a Poclain Hydraulics engineer.

#### Permissible radial loads

### MG11

#### Service life of bearings

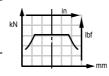

### Test conditions :

#### Static:

- 150 bar [2175 PSI],code 9 displacement
- Max. axial stress = 15% of Fr
- Load radius = 719 mm [28.31 in]

#### Dynamic:

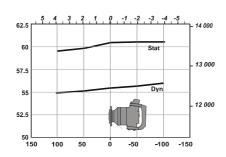

- 450 bar [6527 PSI],code 9 displacement
- Max. axial stress = 15% of Fr
- Load radius = 719 mm [28.31 in]

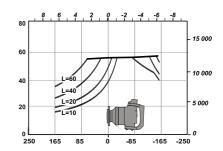

### Test conditions:

L: Millions B10 revolutions at 150 bars (average pressure), with 25 cSt fluid, code 2 displacement, without axial load.

### Permissible radial loads

### MGE11

### Service life of bearings

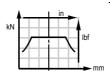

### Test conditions :

### Static :

- 150 bar [2175 PSI],code 9 displacement
- Max. axial stress = 15% of Fr
- Load radius = 719 mm [28.31 in]

### Dynamic :

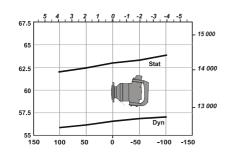

- 450 bar [6527 PSI],code 9 displacement
- Max. axial stress = 15% of Fr
- Load radius = 719 mm [28.31 in]

### Test conditions

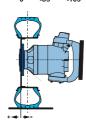

L: Millions B10 revolutions at 150 bars (average pressure), with 25 cSt fluid, code 0 displacement, without axial load.

The service life of the components is influenced by the pressure. You must check that the combination of forces applied (Axial load / Radial load) is compatible with the permissible loads for the components, and that the resulting service lives of these components complies with the application's specifications. For an accurate calculation, consult your Poclain Hydraulics application engineer.

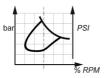

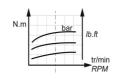

Model code

### **Efficiency**

#### Overall efficiency

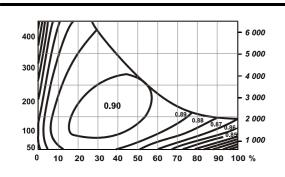

Average values given for guidance for code 0 displacement after 100 hours of operation with HV46 hydraulic fluid at 50°C [122°F].

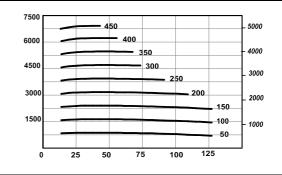

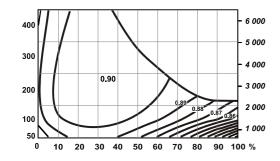

#### Actual output torque

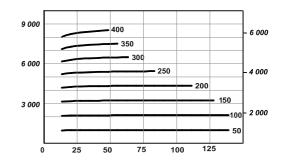

### **MG11**

### MGE11

The starting torque is taken to be approximately 85% of the first value for available pressure. For a precise calculation, consult your Poclain Hydraulics application engineer.

37°

### **Hydraulic connections**

#### connections

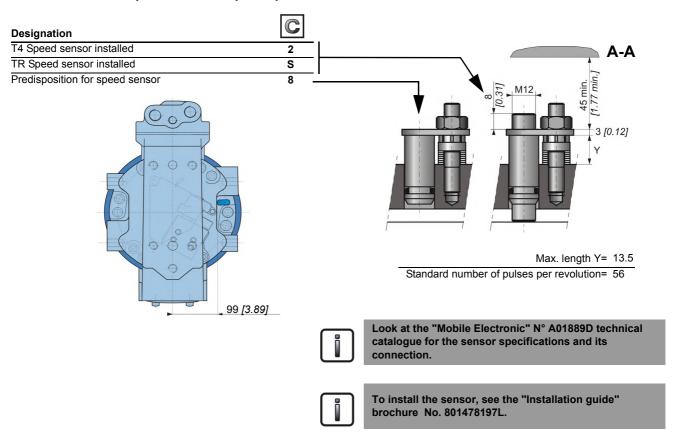

# **OPTIONS**

You can accumulate more than one optional part. Consult your Poclain Hydraulics sales engineer.

### 2 - S - 8 - Installed speed sensor or predisposition

### 7 - Diamond™

Special treatment of the motor core which considerably increases its strength, making the motor much more tolerant to temporary instances of the operating conditions being exceeded.

### E - Reinforced sealing

Requires reinforcement of shaft bearings.
